In today's CC, you need to create a very simple express server. In your server there should be 5 simple routes.

/randomColor

This route should return/send an RGB format color back to the browser.

/currentDate

This route should return/send the current date and time back to the browser.

/joke

This route should return/send a random joke back to the browser.

/quote

This route should return/send a random quote back to the browser.

/riddle

This route should return/send a random riddle back to the browser

Resources:

For last 3 routes you can use [everyday-fun](#) npm package to get jokes,riddles,and quotes.

For random color, you can use [randomcolor](#) npm package or any other package you feel like.

For getting current date and time, use [Date Object](#) in JavaScript.
